Document Overview

This document records the system-level verification results for Portview.

1. Purpose

This document records the executed system-level verification results for the integrated Portview baseline.

2. References

This result record is governed primarily by:

- `SystemTP-603` SystemTP-Z01
- `SV-603-04` Software Verification Plan
- `SV-603-05` Software Verification Report

3. Execution Information

Field	Value
Product under test	`Portview`
Governing procedure	`SystemTP-603`
Software baseline	`Portview 2.2.5.16`
Test platform	`Genoray testing platform`
Configuration	`Default`
Executor	`J. W. Lee`
Execution date	`2026.03.18`
Independent reviewer	`M. C. Boo`
Review date	`2026.03.18`

Field	Value
Execution note	System-level tests were executed on the released Portview baseline using representative end-to-end workflows. The controlled platform configuration and product-level acceptance criteria enabled single-executor throughput. Independent verification is provided through document review by a separate reviewer.

4. Result Summary

System-level verification was reported as completed and the integrated Portview functions were stated to properly support the system specification.

Verification Area	Result Statement	Status
Integrated product baseline	Integrated system-level verification completed	`Pass summary stated`
Supporting system functions	Supporting functions properly support the system specification	`Pass summary stated`

4.1 Procedure-Level Result Set

The result set is aligned to the `SYSP-xxx` system procedure structure defined in `SystemTP-603`.

System Procedure ID	Title	Executor	Date	Status
`SYSP-001`	Product baseline startup and availability	`J. W. Lee`	`2026.03.18`	`Passed`
`SYSP-002`	End-to-end patient and acquisition workflow	`J. W. Lee`	`2026.03.18`	`Passed`
`SYSP-003`	End-to-end viewer and diagnostic workflow	`J. W. Lee`	`2026.03.18`	`Passed`

System Procedure ID	Title	Executor	Date	Status
SYSP-004	End-to-end output and communication workflow	J. W. Lee	2026.03.18	Passed
SYSP-005	Device integrity and recovery workflow	J. W. Lee	2026.03.18	Passed
SYSP-006	Logging and localization workflow	J. W. Lee	2026.03.18	Passed
SYSP-007	Installation and authorized-version acceptance	J. W. Lee	2026.03.18	Passed
SYSP-008	Operational audit and log-review workflow	J. W. Lee	2026.03.18	Passed
SYSP-009	Data persistence and reopen workflow	J. W. Lee	2026.03.18	Passed

5. Deviations And Issues

No separate Portview system-level deviation is identified in the currently available result summary set.

ID	Description	Disposition
NONE-RECORDED	No separate Portview system-level deviation is listed in the currently available records	Accepted as no recorded deviation

6. Evidence References

Evidence Type	Reference	Location
Executed test protocol	Signed system-test execution protocol for `SYSP-001` to `SYSP-009`	QMS controlled archive, test-execution record set
Test environment log	Genoray testing platform configuration and session log	QMS controlled archive
Independent review record	Review sign-off by `M. C. Boo` confirming result acceptance	QMS controlled archive

7. Release Use

This result record is intended to support:

- system-result references in `SV-603-05` Software Verification Report
- lifecycle evidence statements in `SV-603-01` Software Validation Report
- system-level traceability rows in `TM-603` Traceability Matrix
